

AnnotateCRF Studio – User Guide

Overview

AnnotateCRF Studio is a desktop tool used to create CDISC-compliant annotated CRFs (aCRFs) without requiring licensed PDF software. It allows users to add annotations, apply color coding, create bookmarks, and generate final annotated PDFs efficiently.

How to Launch

Double-click the file 'annotatecrf_studio.pyw' to open the application. This will launch the tool directly without any command window.

If the file does not open on double-click:

Right-click the file → Open with → Choose another app → Select 'pythonw.exe' in location (C:\Program Files\Python313\pythonw.exe) → Enable 'Always use this app'.

Basic Workflow

1. Open the source PDF.
2. Select Annotation mode.
3. Click on a location in the PDF to add an annotation.
4. Enter annotation details in the dialog.
5. Adjust position if required by dragging.
6. Add bookmarks if needed.
7. Review entries.
8. Generate the final annotated PDF.

Key Features

- Add and edit annotation boxes directly on PDF pages.
- Automatic color coding based on domain.
- Bookmark creation with hierarchical levels.
- Import and export annotations using CSV.
- Support for multi-user workflows via CSV merging.
- Connector lines for linking annotations.
- Internal page reference links in final PDF.

CSV Usage

Annotations and bookmarks can be exported to CSV for review or reuse. CSV files can also be imported back into the tool. If position fields are blank, annotations will be placed automatically and can be adjusted manually.

Notes

- Python must be installed on the system.
- Use the .pyw file to avoid console window.
- Ensure required files (icons, PDFs, CSVs) are in accessible locations.
